Electric

12-24V, On/Off switch, morse, cable 3m

Light source

12W LED, Included

Remarks

Delivery without brackets. Two mounting brackets and plug-in connections are available.

LED searchlight for improved safety!

Bremen LED is designed for nearly all kinds of search operations. The energy efficient searchlight can also be used to transmit Morse code in emergency situations at sea. It is certified with the internationally known Wheelmark which aims to increase security at sea.

Handheld searchlights are vital tools for night sailing and landing maneuvers. They can also be used for anti-collision protection when placed on the sails for visibility. They can illuminate odd items in the water and most importantly they can be used to locate a crew member that has fallen overboard.

Marine Requirements

The 12 Watt LED module is covered by a clear Fresnel lens. As a certified LED searchlight, it is tested for electromagnetic compatibility (EMC). It is usable with 12–24 Volts. IP68 rating protects the light from dust and enables it to endure continuous immersion in water.
